

JC Baby Flume

Small Capacity Flume Washer

- **Inline Flume Washer**
- **Small Batch Washing**
- **Discharge directly into the JC Salad Spinner**

The **JC Baby flume** is a small capacity flume washer. Our small washer can carefully and effectively wash products such as vegetables, salads, herbs, and some fruit, thanks to its rotary washing system. The water flow can be easily adjusted through the separate sets of water nozzles, and the flow of water can be manually regulated by the three ball valves.

Belt OutFeed

Delicate products along with leaf products are neatly discharged from the washing tank onto the mesh belt conveyor.

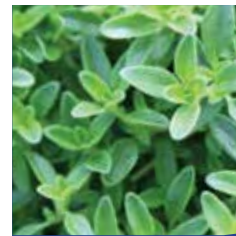

Air knives are situated below the conveyor belt discharge which separate the product from the belt conveyor.

Cleaning the belt which can be released by simply lifting up the drum motor. With an open conveyor structure, cleaning is quick and easy.

With a small footprint, it reduces water consumption.

Water movement and distribution separate the product, giving better contact with the water during washing.

This water flow system takes most product gently under water so there is no need for any devices to allow the product to be immersed.

JC Baby Flume Technical

Voltage 400V, 50Hz, 3 Ph / 230 V 60 Hz, 3PH

Electrical power 2.5 Kw

Total water volume: 220L

Infeed+ outfeed 120mm

Width x length x height:
750x1850x1700mm

Weight 250Kg

Approximate Dimensions
Measurements must be confirmed
